SUBJECT INDEX

Acoustic holograms for moving objects, image reconstruction of, 35
Acoustic wave (SAW) devices in optical signal processing, role of charge coupled devices and surface, 124
Acousto-optic signal processors, 182
Air Force research in optical processing, 2
Ambiguity function generator, an optical wideband, 144
Ambiguity function processing using optical signal processing techniques, radar, 175
Analysis of optical vs digital Fourier transform computers, signal-detection tradeoff, 109

Backward propagation, enhancement of short-range microwave images produced by, 31
Bandwidth signals, optical processing of gigahertz, 161
Beams, space-variant holographic optical systems using phase-coded reference, 6

(CCD) and surface acoustic wave (SAW) devices in optical signal processing, role of charge coupled devices, 124
Character reader techniques for degraded text, optical, 53
Charge coupled devices, incoherent optical signal processing using, 118
Charge coupled devices and surface acoustic wave devices in optical signal processing, role of, 124
Coded reference beams, space-variant holographic optical systems using phase-, 6
Compact real time matched-filter optical processor, 21
Computers, signal-detection tradeoff analysis of optical vs digital Fourier transform, 109
Computing techniques for radar and sonar signal processing, optical, 100

Data, optical digital processing of two-dimensional digital, 80
Degraded text, optical character reader techniques for, 53
Detection tradeoff analysis of optical vs digital Fourier transform computers, signal-, 109
Developing an interactive image digital/optical processing system, problems in, 46
Devices, incoherent optical signal processing using charge coupled, 118
Devices and surface acoustic wave devices in optical signal processing, role of charge coupled, 124
Digital data, optical digital processing of two-dimensional, 80
Digital Fourier transform computers, signal-detection tradeoff analysis of optical vs, 109
Digital/optical processing system, problems in developing an interactive image, 46
Digital processing of two-dimensional digital data, optical, 80

Enhancement of short-range microwave images produced by backward propagation, 31

Fields, optimal focal plane processing for scattered optical, 132
Filter optical processor, compact real time matched-, 21
Focal plane processing for scattered optical fields, optimal, 132
Fogged photographs, optical restoration of, 75
Fourier transform computers, signal-detection tradeoff analysis of optical vs digital, 109
Function generator, an optical wideband ambiguity, 144
Function processing using optical signal processing techniques, radar ambiguity, 175

Generator, an optical wideband ambiguity function, 144
Gigahertz bandwidth signals, optical processing of, 161
Guidance, optical image processing for missile, 11

Holograms for moving objects, image reconstruction of acoustic, 35
Holographic information processing, a tracking receiver with, 151
Holographic optical systems using phase-coded reference beams, space-variant,6
Hybrid systems, noncoherent optical processing with two-pupil, 86

Image digital/optical processing system, problems in developing an interactive, 46
Image processing for missile guidance, optical, 11
Image reconstruction of acoustic holograms for moving objects, 35
Images produced by backward propagation, enhancement of short-range microwave, 31
Images in real time, optical subtraction of, 66
Incoherent optical signal processing using charge coupled devices, 118
Information processing, a tracking receiver with holographic, 151
Interactive image digital/optical processing system, problems in developing, 46

Matched-filter optical processor, compact real time, 21
Microwave images produced by backward propagation, enhancement of short-range, 31
Missile guidance, optical image processing for, 11
Moving objects, image reconstruction of acoustic holograms for, 35
Moving technology, 142

Navy optical processing programs for systems applications — an historical overview, 96
Noncoherent optical processing with two-pupil hybrid systems, 86

Objects, image reconstruction of acoustic holograms for moving, 35
Optic signal processors, acousto-, 182
Optical character reader techniques for degraded text, 53
Optical computing techniques for radar and sonar signal processing, 100
Optical vs digital Fourier transform computers, signal-detection tradeoff analysis of, 109
Optical digital processing of two-dimensional digital data, 80
Optical fields, optimal focal plane processing for scattered, 132
Optical image processing for missile guidance, 11
Optical processing, Air Force research in, 2
Optical processing of gigahertz bandwidth signals, 161
Optical processing programs for systems applications — an historical overview, Navy, 96
Optical processing system, problems in developing an interactive image digital/, 46
Optical processing with two-pupil hybrid systems, noncoherent, 86
Optical processor, compact real time matched-filter, 21
Optical restoration of fogged photographs, 75
Optical signal processing, role of charge coupled devices and surface acoustic wave devices in, 124
Optical signal processing techniques, radar ambiguity function processing using, 175
Optical signal processing using charge coupled devices, incoherent, 118
Optical subtraction of images in real time, 66
Optical systems using phase-coded reference beams, space-variant holographic,6
Optical wideband ambiguity function generator, 144
Optimal focal plane processing for scattered optical fields, 132

Phase-coded reference beams, space-variant holographic optical systems using,6
Photographs, optical restoration of fogged, 75
Plane processing for scattered optical fields, optimal focal, 132
Problems in developing an interactive image digital/optical processing system, 46
Processing, Air Force research in optical, 2
Processing of gigahertz bandwidth signals, optical, 161
Processing for missile guidance, optical image, 11
Processing, optical computing techniques for radar and sonar signal, 100
Processing programs for systems applications — an historical overview, Navy optical, 96
Processing, role of charge coupled devices and surface acoustic wave devices in optical signal, 124
Processing for scattered optical fields, optimal focal plane, 132
Processing system, problems in developing an interactive image digital/optical, 46
Processing techniques, radar ambiguity function processing using optical signal, 175
Processing, a tracking receiver with holographic information, 151
Processing of two-dimensional digital data, optical digital, 80
Processing with two-pupil hybrid systems, noncoherent optical, 86
Processing using charge coupled devices, incoherent optical signal, 118
Processing using optical signal processing techniques, radar ambiguity function, 175
Processor, compact real time matched-filter optical, 21
Processors, acousto-optic signal, 182
Propagation, enhancement of short-range microwave images produced by backward, 31

Radar ambiguity function processing using optical signal processing techniques, 175
Radar and sonar signal processing, optical computing techniques for, 100
Reader techniques for degraded text, optical character, 53
Real time matched-filter optical processor, compact, 21
Real time, optical subtraction of images in, 66
Receiver with holographic information processing, a tracking, 151
Reconstruction of acoustic holograms for moving objects, image, 35
Reference beams, space-variant holographic optical systems using phase-coded, 6
Research in optical processing, Air Force, 2
Restoration of fogged photographs, optical, 75
Role of charge coupled devices and surface acoustic wave devices in optical signal processing, 124

(SAW) devices in optical signal processing, role of charge coupled devices and surface acoustic wave, 124
Scattered optical fields, optimal focal plane processing for, 132
Short-range microwave images produced by backward propagation, enhancement of, 31
Signal-detection tradeoff analysis of optical vs digital Fourier transform computers, 109
Signal processing, optical computing techniques for radar and sonar, 100
Signal processing, role of charge coupled devices and surface acoustic wave devices in optical, 124
Signal processing techniques, radar ambiguity function processing using optical, 175
Signal processing using charge coupled devices, incoherent optical, 118
Signal processors, acousto-optic, 182
Signals, optical processing of gigahertz bandwidth, 161
Sonar signal processing, optical computing techniques for radar and, 100
Space-variant holographic optical systems using phase-coded reference beams,6
Subtraction of images in real time, optical, 66
Surface acoustic wave devices in optical signal processing, role of charge coupled devices and, 124
Systems applications — an historical overview, Navy optical processing programs for, 96
Systems, noncoherent optical processing with two-pupil hybrid, 86
Systems using phase-coded reference beams, space-variant holographic optical,6

Techniques for degraded text, optical character reader, 53
Techniques, radar ambiguity function processing using optical signal processing, 175
Techniques for radar and sonar signal processing, optical computing, 100
Technology, the moving, 142
Text, optical character reader techniques for degraded, 53
Tracking receiver with holographic information processing, 151
Tradeoff analysis of optical vs digital Fourier transform computers, signal-detection, 109
Transform computers, signal-detection tradeoff analysis of optical vs digital Fourier, 109
Two-dimensional digital data, optical digital processing of, 80
Two-pupil hybrid systems, noncoherent optical processing with, 86

Wideband ambiguity function generator, an optical, 144
